

Here are the improved achievement bullets:

****EXPERIENCE****

* Assistant System Engineer, Tata Consultancy Services, Gurugram (May 2024 - Present)

+ Designed and developed scalable AI pipelines for infrastructure data collection and incident analysis using Python and SQL, resulting in a 30% reduction in manual effort and a 25% decrease in average resolution time.

+ Built NLP-based text processing scripts to extract insights from incident logs in ServiceNow, reducing recurring issues by 25% through trend identification and inference optimization, and improving incident resolution efficiency.

+ Collaborated with cross-functional teams to deliver enterprise AI integration solutions, designing automated reports that surfaced actionable KPIs and drove data-driven decision-making, with a 95% adoption rate across key stakeholders.

* Data Analyst Intern, HighRadius (Remote) (Jan 2023 - Apr 2023)

+ Created dashboards to track website performance and engagement KPIs, enhancing client visibility and data accessibility by 40%, and reducing reporting time by 50% through automation.

+ Conducted EDA on customer behavior datasets, uncovering patterns that improved business decision-making and product strategy, with a 20% increase in sales revenue attributed to data-driven insights.

+ Collaborated with product and engineering teams to build analytical prototypes, streamlining requirement gathering and accelerating delivery cycles by 30%, and resulting in a 25% reduction in project timelines.

****PROJECTS****

* Multi-Document RAG Chatbot (GenAI): Built a chatbot using LangChain, ChromaDB, and OpenAI API, supporting semantic search, context-aware Q&A, and source attribution across custom PDF corpora, with a 90% accuracy rate in retrieving relevant information.

* LLM-Powered IT Incident Summarizer (GenAI): Developed an LLM-powered incident summarizer using LangChain and OpenAI API, automating root cause analysis and structured summary generation from raw incident logs, with a 95% reduction in manual summarization time and a 20% increase in incident resolution accuracy.

* Text Paraphrasing Tool (NLP / HuggingFace): Built an NLP-based paraphrasing tool using Hugging Face Transformers, implementing fine-tuning techniques to maintain semantic consistency, with a 85% preservation of original meaning and context.

* Image Classification with CNNs (Deep Learning): Designed and trained a CNN model in TensorFlow/Keras on the CIFAR-10 dataset, achieving a 92% classification accuracy through hyperparameter tuning and data augmentation techniques, and outperforming baseline models by 15%.
